Return of the Repressed?

Psychoanalysis and the Legacy of Totalitarianism in the 21st Century

Warsaw, 15 - 17 March 2019
The term “Return of the repressed” refers to the tendency discovered by Freud to repeat the past that has not been worked through in the form of symptoms. We would like to ask the question if the “antiliberal turn” in Poland and in other post-communist countries, also noticeable in Germany and in some West-European countries, could be treated as the symptom of the legacy of past century totalitarianism that has not been worked through? Or is it the expression of new regression to archaic fears and politically manipulated aggression towards the globalisation processes that cannot be integrated by the traditional democratic mechanisms? Does the current crisis of liberal democracy and the breaking down of European project are only temporary phenomena or do they have deeper roots in the sociocultural transformations of our times?

Psychoanalysis as the heir of European Enlightenment preached the ideas of social and individual emancipation. Freudian project consisted of three elements: ethics of self-knowledge, critical hermeneutics of culture and psychotherapy. But as the result of the development of psychoanalysis the therapeutic element became dominating.

We would like to ask the question about the critical potential of contemporary psychoanalysis. Does it offer the adequate cognitive means to understand the disturbing social phenomena? Could it become again the critical theory and practice?
15.03. 2019, Friday
